

# Front End Developer Assignment

Create the following using **Redux and React**.

- 1. Login page** path: /
  - a. login form
  - b. create new user form
- 2. Project Page** path: /project
  - a. Show list of all projects
    - i. when list item is clicked should route to page 2 (**project detailed view**) /project/:project\_id (where Project ID is dynamic)
  - b. add new project -- form
    - i. Form details: name, date, project description(text area)
- 3. Project Detailed View** path: /project/:project\_id
  - a. show title - name of the project and total count of customers
  - b. show list of all customers (should support pagination after list exceeds 8 items)
    - i. Display customer name, phone no and email address
  - c. add new customer -- form
    - i. Form details: name, phone no, email, address

Note:

1. Use JSON server as Database instead of spending time creating backend.
2. If project is not completed in given time, we still encourage you to send us the project.
3. What we look for:
  - Clean code and readable code
  - Development approach
  - Use of appropriate libraries
4. Email drive link for the project or just share project git link
